Professional Summary

Full Stack Engineer with **2+ years of experience** at CustomerInsights.AI, working on **ciATHENA**, an agentic AI platform for pharma commercial teams. Built the interface for its first use cases as a Junior Data Engineer; since the promotion to Associate Full Stack Engineer, owns those use cases across frontend and backend and delivers them for several pharma clients. Works in **React.js**, **Next.js**, **TypeScript**, **Python** and **FastAPI**, builds **agentic AI**, **RAG** and **LLM** features with **LangChain** and **LangGraph**, and uses **GitHub Actions**, **Docker** and **Azure** for delivery. **Employee of the Quarter** in 2025 and 2026.

Experience

CustomerInsights.AI (CIAI)

Gurugram, India

Associate Full Stack Engineer

Apr 2026 – Present

*ciATHENA: full-stack ownership of the pharma use cases. **Employee of the Quarter**, September 2026.*

- Own ciATHENA's core use cases (**MMM**, **FAST**, **Payer Spine**, **Data Stewardship** and others) across the **React.js** and **TypeScript** screens and the **Python** and **FastAPI** services behind them, and deliver them for separate pharma clients, each with its own data and features.
- Build the backend for **Field Intelligence** and the **agentic AI** features around it: agent configuration screens, the service that stores and runs each agent, and **LangChain** and **LangGraph** workflows that pause for a person's approval before the agent acts.
- Build the **LLM** and **RAG** layer: **embeddings** and a **vector database** for semantic search, so users can ask questions in plain language and get answers from their own data.
- Own the backend for the data-mapping and review workflows (schema and entity review, mapping, batch approvals) on **PostgreSQL** and **Snowflake**.
- Design the system with the team: a configuration-driven backend, so a new client or use case needs setup rather than a rebuild; services that scale; and results streamed to the UI over **Server-Sent Events (system design)**.
- Develop the ongoing-threads, collaboration and insights hub modules, with **ECharts** charts and **Zustand** state.
- Implement **CI/CD** in **GitHub Actions**, run services in **Docker** on **Azure**, and test with **Jest** and **pytest**. Track work in **Jira**.

Junior Data Engineer

Sep 2024 – Mar 2026

*Frontend engineer on ciATHENA from when it started in 2025. **Employee of the Quarter**, September 2025.*

- Built the interface for ciATHENA's first 5–6 use cases, including **MMM**, **FAST**, **Payer Spine** and **Data Stewardship**, from logic described by pharma business experts.
- Built **Field Intelligence** in the ciATHENA hub, including the **MyDay** and **District View** screens and their charts, in **React.js**, **Next.js** and **TypeScript**.
- Built the conversational analytics interface with streaming **Server-Sent Events (SSE)**, ongoing threads, session restore and duplicate-request guards.
- Built **10+ reusable components** that the use cases share, and fixed an **ECharts** bug that recovered **11 product series across 21 months**, with **14 regression tests**.
- Shipped features for **4 client-facing products (LENS, TPA, CORE, Patient Flow)** with REST API integration and responsive layouts.
- Wrote **Jest** unit tests, ran QA across full user flows, and refactored **5+ modules**.

Technical Skills

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Zustand, TanStack Query, Material UI, ECharts, Responsive Design
- **Backend & APIs:** Python, FastAPI, Pydantic, Node.js, Express.js, REST API Design, GraphQL, Server-Sent Events, JSON, Async Programming, Performance Optimization
- **AI & LLM:** Agentic AI, LangChain, LangGraph, RAG, LLM Integration, Azure OpenAI, Text Embeddings, Semantic/Vector Search (Chroma), AI Agents, Human-in-the-Loop, Prompt Engineering
- **Databases & Data:** PostgreSQL, Snowflake, SQL, MongoDB, Data Modeling, Data Validation & Quality
- **System Design:** Scalable Service Design, Config-Driven Architecture, Event Streaming (SSE), Audit Logging, Feature Flags
- **Cloud, Testing & Practices:** GitHub Actions (CI/CD), Docker, Microsoft Azure (Containers, Blob Storage), Git, GitHub, Linux, Jest, pytest, SonarQube, Jira, Code Review, Debugging, Agile/Scrum, Figma

Projects

Churn Prediction & Analysis – Python, scikit-learn, Flask [\[GitHub\]](#)

Nov 2023 – Dec 2023

- Built a machine learning model that predicts customer churn with **~93% accuracy** and serves predictions through a Flask app.

SkySketch – Python, OpenCV, MediaPipe [\[GitHub\]](#)

Sep 2023 – Oct 2023

- Built a real-time drawing app controlled by hand gestures, using OpenCV and MediaPipe to track the index finger.

Education

B.Tech, Computer Science & Engineering – Graphic Era Hill University, Bhimtal · CGPA 8.62

Aug 2020 – Aug 2024

Certifications

- Data Analysis with Python – IBM; Google Data Analytics – Coursera; Forage: Accenture Nordics Developer, JPMorgan Software Engineering
